

Theme Builder Tutorials

- [Performance Tuning](#)
- [Adaptavist Website Theme v4](#) — This tutorial shows how we customised our website, including the tabs down the side and the fancy page borders, etc.
- [Changing the layout based on context](#) — switching layouts dependant on the context of the page being viewed
- [Clickr Theme](#) — This tutorial shows how to re-create the Clickr theme that's bundled with Confluence, using Theme Builder.
- [Customising Menu Styles](#) — This tutorial shows how to customise menus beyond the pre-defined menu themes...
- [Customising the Search button](#) — This tutorial explains how to customise the search box using CSS, eg. adding a graphical search button...
- [Integrating WordDAV or Office Connector](#)
- [Layout Defaulting](#)
- [Making Builder 3.x behave like Builder 2.x](#)
- [Opening Links in New Window](#) — This tutorial explains how to create links that open in a new window or tab...
- [Over-sized content and nicer panels](#) — Sometimes content is too wide to fit on screen and causes nasty horizontal scroll bars - this quick tutorial explains how to mitigate some of these issues and make common panels look nicer at the same time...
- [Showing content based on Decorator](#) — Using decorators to display or hide content is a powerful way to flexible layouts that adapt to according to the type of page being viewed.
- [Space-level Theme Settings](#) — This tutorial shows how to allow a single layout to be used for multiple spaces whilst allowing customisation on a space-by-space basis.
- [Upgrading from Builder 2.x to 3.x](#)
- [Working with Flags](#) — Flags allow you simplify switching logic and improve performance within your themes...
