

Backup Tab

[[Backup Layouts](#)] [[Restore Layouts](#)] [[Import 2.0 space configurations](#)] [[Import 2.0 backup file](#)] [[Delete layout data](#)] [[Reset layout data](#)]

The Backup Tab allows you to backup and restore layouts and also import Theme Builder 2.x configurations. This tab is accessed from [Theme Administration](#) in Theme Builder 3.0 and above.

Backup Layouts

Backup Layouts

To back up a layout, please select the layout desired and press download.

Layout

As the title suggests, this allows you to take a backup of your Theme Builder Layouts. The Default option from the dropdown menu provides a back up of all of the layouts. Alternatively select an specific layout to back up from the dropdown menu.

The resultant output is an XML document which is exported to the default download area for your computer.

Restore Layouts

Restore Layouts

To upload a previously backed up layout, please select the file using the controls below

☐ **Clean Install (NB: will delete current settings)**

This area allows you to browse for and then upload the back up XML layout that you have previously exported. If you want to upload a layout and remove its settings, make sure that you tick the option "Clean Install". The "current settings" that this panel refers to are the options that are set in the Theme Builder Manage Layouts area, under the tabs for js, menu, css and so on.

Import 2.0 space configurations

Import 2.0 space configurations

To import theme configurations from a builder 2.0 system, select the space key and enter the desired layout id below.

Space Key:

Layout prefix:

Layout postfix:

☒ **Associate with space**

Allows import of Theme Builder 2.0 Space Configurations. You can set an optional prefix and suffix that will be applied to themes that you import.

Import 2.0 backup file

Import 2.0 backup file

To import theme configurations from a builder 2.0 backup file, select the file below and upload.

Layout Id:

Use this to import Theme Builder 2.0 backup files.

Delete layout data

Delete layout data

To delete a layout (and all child layouts) please download a backup of ALL layouts, enter the site's base URL and select the layout to delete from the list below

Server Base Url:

Layout Id:

In order to delete individual layouts, existing layouts must be backed up using the Backup Layouts option. Then the delete layouts will only function if you add the server base URL.

Reset layout data

Reset layout data

To remove all layout data and reset the default layout please download a backup of ALL layouts, then enter the site's base URL and click delete.

Server Base Url:

☐ **Delete layout data before resetting**

This functions in a similar way to the "Delete Layout Data" area. Existing layouts must be backed up, and the server base URL must also be provided. This option deletes ALL layouts and resets back to the default layout.
