Firefox Extensions for CSS

Firefox Extensions for CSS

If you're customising CSS, Firefox is the best browser for the job - especially with these nifty extensions...
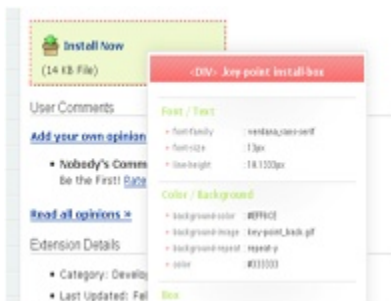

Why Firefox?

The web browser is by far the most standards compliant web browser currently available and will greatly increase your productivity when it comes to customising style sheets.

CSS Viewer

The CSS viewer plugin allows you to mouse-over any element on a web page to see it's ID and classes (if applicable) as well as existing styles applied to the element.

Firebug

FireBug is one of the most powerful tools for examining web pages - amongst other things, it allows you to interactively inspect HTML and CSS elements of a web page.
