

## Builder 3.3.6 release notes

## Overview

Builder 3.3.6 is

a bugfix release primarily to address display issues in confluence 3.0

## Notes

- Make 'skip to' link point to atb-content
- Dont escape the excerpt in blog-list
- Avoid using atlassian's .getExcerpt
- Fix %targetpagename% replacements
- Use tinyurls in blog-list
- Menulink tooltips now default to target page name when not set and valid
- make blog-archive respect context-paths
- Backport the trimcomments action
- Add support for the personal-sidebar
- workaround usages of \$action in atlassian webui items
- allow space title & logo to be forced
- ensure descriptions don't use html
- ensure cluster-manager exists
- Remove putInSession code
- Make aliases play nicer with relative paths
- Add space-description macro
- Update sorted-children to allow for nested children and add context-based classnames
- Unify the interpretation of space= & page=
- add flags check to menuitems
- add notFlags check to builder-show/hide and menuitem
- Avoid chimping the entire JS resource is AJS is not present
- Escape URLS used by editinword
- Avoid double-scrolling fixed width layouts
- Update webui context generation to fit better with 3.0
- Escape values in alias tab
- Add profile-username macro
- Allow wikimenu to deal with ordered as well as unordered lists
- Fix quicksearch drop-down positioning
- Ensure that the entity is an abstract page before trying to pull the list of attachments
