

link to viewing global labels

Hello,

I have used the following markup to link to popular labels in the current space:

```
{compound-menuitem:labels|icon=bookmark|caption=Labels}
```

On that page, there is a link to global popular labels. How can I link to the global popular labels directly?

I notice in the global labels link removes the "key" parameter from the space labels URL: <http://www.mywiki.com/labels/listlabels-heatmap.action?key=MySpace> -> <http://www.mywiki.com/labels/listlabels-heatmap.action>

Thanks much in advance.
