

with-sibling macro

Description

The `{with-sibling}` macro is essentially a shorthand for `{with-page:direction=sibling}`.

As the search direction for `{with-sibling}` is already set to "sibling", the direction parameter (which is required for `{with-page}`) is not required here.

The remainder of the parameters and usage of `{with-page}` also applies to `{with-sibling}`. For specifics and examples using this macro, please refer to the [{with-page macro}](#) page.
