list-* macros

Description

The `list-*` macros render a bullet-point list of content matching the given search criteria.

Pages are searched either up or down the page tree, from a given starting point. Search attributes that can be specified, include:

- labels that pages must have
- metadata *keys* or *key:value* pairs that the pages must posess
- specific page titles

Additionally, any number of spaces can be specified to search in.

Finally, a default page can be specified, to be returned by the macro in case no page was found matching the search criteria.

The following `list-*` macros are available:

- {list-pages}
- {list-ancestors} - same as {`list-pages:direction=up`}
- {list-descendants} - same as {`list-pages:direction=down`}
- {list-siblings} - same as {`list-pages:direction=sibling`}

Please refer to the links above for specific information on each macro.
