Early access 4.0.0

⊙ Builder 4.0.0 is now generally available, you should use the version on the Downloads page in preference to this prerelease version

Our Early Access Programme (EAP) allows interested parties to try out the latest development releases of Theme Builder, prior to the final stable release. As such, **you should not use EAP releases in production environments** - they may contain bugs or partially complete functionality.

Builder 4.0.0 removes usage of the problematic ext-js library and adds builder resources and zipped layout backups

⊙ **Requires confluence 3.1**

⊙ Upgrading to Builder 4.0.0-M8 or later will cause customised dashboard information to be 'lost', you should use the rebuild tool on the backup tab of builder admin to import the builder 3.x dashboard content to the new layout structure

⚠ Don't forget to upgrade to latest Page Information Tools and Content Formatting Macros plugins as those also have new releases for Confluence 3.1.

Builder 4.0.0-RC2

- Update i18n
- Fix bug when editor called for update before it is ready
- Fix popup scroll position when switching tabs
- Copy textarea styling to CodeMirror
- Update to jQuery 1.4.1
