

Customising Menu Styles

⚠ Under construction

This tutorial shows how to customise menus beyond the pre-defined menu themes...

Preface

This tutorial assumes that you are already familiar with the basic functionality within Theme Builder 3.x such as creating and editing layouts using the [Layout Manager](#). It also assumes that you have a good understanding of [CSS](#).

Where possible, we recommend using the pre-defined styles and settings on the [Menus Tab](#) as these are heavily tested on a wide range of operating system and web browser combinations.

Topics Covered

This tutorial will be useful to you if you are want to:

- customise the top-level menu bar
 - background colour and borders
 - rollover styles
 - text styles
 - separator styles
- customise pop-up menus
 - background colour and borders
 - rollover styles
 - text styles
 - separator styles

Contents

The tutorial is split in to to topics:

- [1 - Changing menu bar styles](#) — The top-level menu bar is always shown and it's design should fit with the overall look and feel of your theme layout...
- [2 - Changing Pop-up Menus](#) — Pop-up menus use separate styles to the menu bar...
- [3 - Extreme Menu Customisation](#) — If you need complete control over menu styles, you can disable or significantly reduce the usage of pre-built styles...

Let's get started: [1 - Changing menu bar styles](#)
