

viewmenu macro

Description

This macro inserts the contents of the view menu as defined in theme config into a menu definition.

Usage

```
{viewmenu}
```

Parameters

Property	Required	Default	Notes
hideanon		false	If set to <i>true</i> the menu will not be output to anonymous users, a useful performance tweak for sites that are accessible to anonymous users who do not need edit privileges.

Examples

Basic Use

Use this macro in a menu definition to quickly insert the view menu defined in theme configuration.

```
{viewmenu}
```

Hiding from anonymous users

In many cases the Builder theme is used to allow Confluence to deliver glossy websites where the majority of users will be anonymous consumers, i.e. they won't need all of the confluence functionality.

Because the items in the View menu have to do lots of permission checking, you can improve performance of your site by hiding the menu from anonymous users:

```
{menubar}  
{viewmenu:hideanon=true}  
{menubar}
```

You can easily add any of the [menulinks](#) (see [menulink macro](#)) to your menu bar should you require certain features to remain available (eg. printable view, etc).

CSS Customisation

To follow.
