

# Sample Theme Configuratons

This page is now deprecated, please check out the [layout library](#) instead

## Sample Theme Configurations

Builder is a very flexible theme and you can use it to create all kinds of different designs. The theme configuration files attached to this page should help illustrate how you can achieve various layouts, designs and navigation.

- [Flickr](#) — This theme config makes Confluence look similar to the popular photo-sharing site, Flickr.
- [MeaningfulMarkup \(builder 2.0\)](#) — This theme config is taken from the MeaningfulMarkup wiki and shows how to create familiar view/edit /attachments/info tabs at the top of pages.
- [MediaWiki \(builder 2.0\)](#) — This theme configuration is based on the popular open source wiki, MediaWiki - the same wiki used for Wikipedia.
